Software Engineering Applications/Projects

E-Commerce Database Manager

Created for TeeCommerce

Express, React, MongoDB, Node, Bootstrap

- Manages one central database for dozens of online stores that share the same drop-shipped inventory. Full backend GUI to add products, stores, and variations.
- Bulk API procedures to update items and variations across all stores at once, replaces a CSV export that had to be ran on each store individually.
- Integrates directly with Ecwid ecommerce platform via REST API.

Github Gradebook Platform

Created for Stack Education

Express, React, MySQL, Node, Semantic UI, Passport oAuth

- Allows any teacher to run a full gradebook platform with Github as their back bone.
- Ability to monitor forks, pull requests, and assign grades to student's repos over Github GraphQL API calls.
- Ability for students to login and review due dates and grades.
- Supports multiple cohorts/classes/programs in one database.

Scrum Poker

Personal Project

Express, React, MongoDB, Node, Semantic UI, Passport oAuth, Socket.IO

- Allows project managers to create free rooms to administer scrum poker/planning poker sessions with their teammates.
- Users Google authentication for room administration.
- Socket.IO is used to allow live on-the-fly communication.

Work Experience
